

GPSports EVO

GPSports Evo is a plug-and-play athlete monitoring solution for the coach that wants accurate and reliable performance data without the hassle of investigative post-session analysis.

The easy-to-use and scientifically-validated technology allows quick reporting on athlete volume and intensity using stock graphs and tables to compare athletes over micro and macro cycles.

The GPSports Evo is the smallest GPS tracking device in team sport, which means faster buy-in internally from players and coaches, and a less obtrusive solution on the field. With extensive testing in the most physically-demanding sports in the world, the GPSports Evo is designed to take a beating.

SMALL AND ROBUST

The GPSports Evo is the smallest GPS tracking device in team sport, which means faster buy-in internally, and a less obtrusive solution on the field.

SPEED TO INSIGHT

With the fastest download speed from the device to the software, you will spend more time analysing your information and less time waiting for your data to sync.

COACH FRIENDLY

GPSports is designed for the coach that wants to make informed decisions, but doesn't have the time for a deep-dive into complex data.
